Lucknow**

*Atlas of the Middle Jurassic Ostracods of Western India* represents a unique combination of up-to-date systematic, stratigraphic and geographic distributional information. Each taxon is very well illustrated along with crisp and concise descriptive matter. The Atlas contains records for species from the Middle Jurassic of Rajasthan and Kachchh, western India and will be a key reference for researchers and students working on Jurassic ostracodes.

*Atlas of the Middle Jurassic Ostracodes from Western India* is valuable and helpful to have the taxonomic and biostratigraphical data gathered in one place. The organization, content and layout are good and the volume will be a worthy addition.

Price : Rs. 5,000.00  
US \$ 100.00
